KEY PROJECTS:

1. **Anchor Software Solution:** Anchor Software Solution for patient management is a comprehensive platform designed to streamline healthcare operations, enhance patient care, and improve overall clinic or hospital efficiency. These features ensure that administrators can manage users, access permissions, and system operations seamlessly while maintaining a secure environment for patient data and healthcare processes.

Duration: 6 months

Role(s): Lead Developer

Responsibilities:

- Developed a Patient Attendance Management System using CodeIgniter, Core PHP, MySQL, and Angular, enabling healthcare providers to track patient attendance and appointment history.
- Implemented a user-friendly interface for patients and healthcare providers to manage attendance, view history, and update records in real-time.
- Integrated Razorpay payment gateway to enable seamless online payments for appointment bookings, ensuring secure and efficient transactions.

Technology Environment: PHP, Code Ignitor, Angular, Core PHP, MySql, Razorpay

2. **YOSO Ecommerce:** Yoso, a multi-store platform allowing users to create and manage multiple stores within a single project. The application integrates with the Stripe payment gateway to securely process transactions, enabling seamless payments across various stores. This platform provides an intuitive interface for store owners to manage their products, orders, and payments in one unified system, while ensuring scalability and security.

Duration: 6 Months

Role(s): Developer

Responsibilities:

- Front end development ,Responsive Design,Back end development
- Created multiple stores in this project with multiple theme options
- Payment Gateway stripe.

Technology Environment:PHP, Laravel, MySQL, Stripe

3. **Quimd** : The Qiumd Project is a comprehensive patient-to-doctor appointment booking system, designed to streamline the process of scheduling and managing medical appointments. The platform enables patients to easily find available doctors, book appointments, and receive reminders, all within an intuitive, user-friendly interface.

Duration: 3 Months

Role(s): Project Lead

Responsibilities:

- Client Interaction
- Uploaded the project to the server for production deployment, ensuring smooth transition from development to live environment.
- Designed the theme of the application to create a user-friendly and visually appealing interface, focusing on both functionality and aesthetics.
- Worked on both front-end and back-end development, implementing features and functionalities that met the client's needs.
- Performed thorough testing of the application to identify and fix bugs, ensuring high-quality performance and user experience.
-

Technology Environment: Core PHP, HTML, Css, Javascript, JQuery

4. **Wise Invoice:** Is an invoicing application designed to streamline the process of generating invoices, managing payments, and ensuring accurate billing for businesses of all sizes. The system offers a user-friendly interface, making it easy for businesses to create professional invoices, perform GST calculations, and export invoices in PDF format. It ensures accuracy, compliance, and efficiency in handling invoicing tasks.

Duration: 3 Months

Role(s): Lead Developer

Responsibilities:

- Developed and maintained an Invoice Creation Software using Laravel and MySQL, streamlining the invoicing process for users.
- Designed and implemented features for generating, managing, and tracking invoices, ensuring accuracy and efficiency.
- Integrated payment gateway systems for seamless transaction processing and invoice payment tracking.

Technology Environment: PHP, Laravel, SQL

5. **Patient Book Appointment:** This project is designed to simplify the process of scheduling doctor appointments. It allows patients to easily select doctors based on their specialty, availability, and department, ensuring an efficient and seamless booking experience

Duration: 2 Months

Role(s): Lead Developer

Responsibilities:

- Developed and implemented an appointment booking system that allows patients to schedule appointments and doctors to view their schedules in a calendar format.
- Used PHP and MySQL to build a dynamic, user-friendly system for managing appointments and doctor availability.
- Designed and integrated features for real-time booking, automated appointment confirmations, and reminders for patients and doctors.

Technology Environment: PHP, Laravel, MySQL, Razorpay, subscription

6. **HCOM:** Community Engagement and Real-Time Communication Platform. It's an interactive community platform designed to facilitate real-time communication, content sharing, and social interactions among users.This platform aims to build an active, engaging online community where users can share information, participate in discussions, and stay connected.

Duration : 3 Months

Role(s) : Lead Developer

Responsibilities :

- Implement key backend functionalities such as user registration, post creation, comment management, like/dislike features, and real-time chat capabilities.

- **Database Management:** Design and manage the database schema for storing user data, posts, comments, likes, chat messages, and notifications using MySQL or other relational databases.
- **API Integration:** Develop and integrate RESTful APIs for interaction between the frontend and backend, ensuring seamless data flow and efficient performance.

Technology Environment : PHP, laravel,pusher,html,css,java script,jquery

7. **Fashion on Rent:** It's a web-based platform designed to allow customers to rent high-quality, fashionable clothing and accessories for a limited period. The platform, developed using PHP for the backend, ensures robust performance, secure transactions, and smooth functionality. It is aimed at customers who want access to stylish, designer clothing for special occasions such as weddings, parties, or festivals, without the high cost of ownership. The platform also offers a variety of Lehengas available for rent, catering to customers looking for traditional wear.

   Duration : 2 Months

   Role(s): Web Developer

   Responsibilities:
   - Api Integration
   - Database design and management
   - Build and maintain systems for creating, tracking, and managing orders, including rental durations, delivery schedules, and returns.
   - Integrated Instamojo Integration

   Technology Environment: Core PHP,html,css,java script,jquery, Instamojo

8. **purehomeandliving:** Pure Home & Living is an online platform specializing in premium home décor and lifestyle products. The website offers a curated selection of items, including furniture, home accessories, kitchenware

   Duration : 1 Year

   Role(s): Developer

   Responsibilities:
   - Development and testing
   - Integrating third-party API'S
   - Fixing bugs

   Technology Environment : Opencart, MySQL

9. **my little mate:** Uses our smart technology to protect pet buyers and sellers from the rising incidence of pet scamming.

   Duration: 2 Years

   Role(s): Developer

   Responsibilities:
   - Development and testing.
   - API Integration
   - Fixing bugs

Technology Environment ReactJS, MYSQL
